MAY HALF TERM

Joke of the week!

Why do fish like to eat worms?

Because they get hooked on them!

Just because – we might get lucky!!!

Take extra care to protect babies and children. Their skin is much more sensitive than adult skin, and damage caused by repeated exposure to sunlight could lead to skin cancer developing in later life.

From March to October in the UK, children should:

- cover up with suitable clothing
- spend time in the shade – particularly from 11am to 3pm
- wear at least SPF15 sunscreen to areas not protected by clothing, such as the face, ears, feet, and backs of hands.

Spotlight on...

'Simply smart science!'

When you think about it, science is all around us. It's not just a 'subject' that's studied in school – we live and breathe it every single day. As our children grow and discover the world, they learn the basics without even realising it. Knowing that glass will break when it's dropped is a perfect example. Children know it will break, they just won't know that it's because of a big phenomenon called gravity! That's why it's really easy to help children learn about the world around them, and support their discovery and curiosity about science.
